

# QuickTrack – by **DATA BAR Data Solutions.**

QuickTrack was designed to fill the 'entry level' gap in counting, tracking the movements of Inventory and auditing Assets. All this, without the high cost and the complicated processes normally associated with these systems.

QuickTrack is aimed squarely at retailers and small businesses where staff often carry out many different tasks. The simple and straightforward processes within QuickTrack allow the staff to improve the accuracy of their tasks and increase their efficiency therefore achieving more in any given working day.

QuickTrack is expandable. As part of the QuickSeries, all the equipment is compatible with future upgrades. Most of the equipment can also be used with other 'Quick Series' systems as well, thus ensuring your investment dollars are maximized.

The System –

There are three modes of operation – firstly, 'Count and Compare' - allows you to import a file – csv or iif (QuickBooks) and compare a physical count. Secondly, 'Item Audit' – uses a csv file of your assets and locations and allows you to compare items at a location. Detect any missing or moved ones, all on the portable scanner. Thirdly, 'Move and Manage' - allows you to move your inventory around to different locations, ie receive, ship orders, move to bulk locations or out to external suppliers for re work or additional manufacturing.

On the following pages are several Sample reports. Additionally all 'sample' items have 'assigned' locations – this allows for quick and easy identification of any errors.

DATABAR –

Established in 1984. We developed one of the earliest Australian built Barcode Scanners. Within a few years we expanded the range to include Data Collectors for Asset and Stocktaking. Now with technical manufacturing firmly entrenched in Asia, we are proud to be able to offer outstanding quality and value from our leading suppliers. We have worked closely with them for over 10 years and can attest to the durability and ongoing support they can provide.
