

QuickCount – by DATABAR Data Solutions.

QuickCount was designed to fill the gap in the control of stock without the high cost and the complicated processes normal associated with these systems.

QuickCount is aimed squarely at retailers and small businesses where staff often carries out many different tasks. The simple and straightforward processes within QuickCount allow the staff to improve the accuracy of their tasks and increase their efficiency. Achieving more in any given working day.

QuickCount is expandable. All the equipment will be backward compatible to future upgrades. Most of the equipment can also be used with other systems as well thus ensuring your investment dollars are maximized.

The System –

On the following pages are several types of reports. These samples are based on output file from Quickbooks and have stock locations included. Additionally all stock is warehoused with locations to allow quick and easy identification of any errors. These additional (highlighted) columns may not be available from all Accounting systems and therefore will not appear in the final reports from your system.

DATABAR –

Established in 1984. We developed one of the earliest Australian built Barcode Scanners. Within a few years we expanded the range to include Data Collectors for Asset and Stocktaking. Now with technical manufacturing firmly entrenched in Asia. We are proud to be able to offer outstanding quality and value from our leading suppliers. We have worked closely with them for over 10 years and can attest to the durability and ongoing support they have provided.
